

# **CCTV42**

## **AI Event and Search Management**

Please read this manual carefully before using the product and keep it for further reference. If there is any aspect of the NVR or User manual you would like to discuss please call our technical department

This manual will take you through the aspects of the AI Analytics, event and search portions of the NVRs operation.

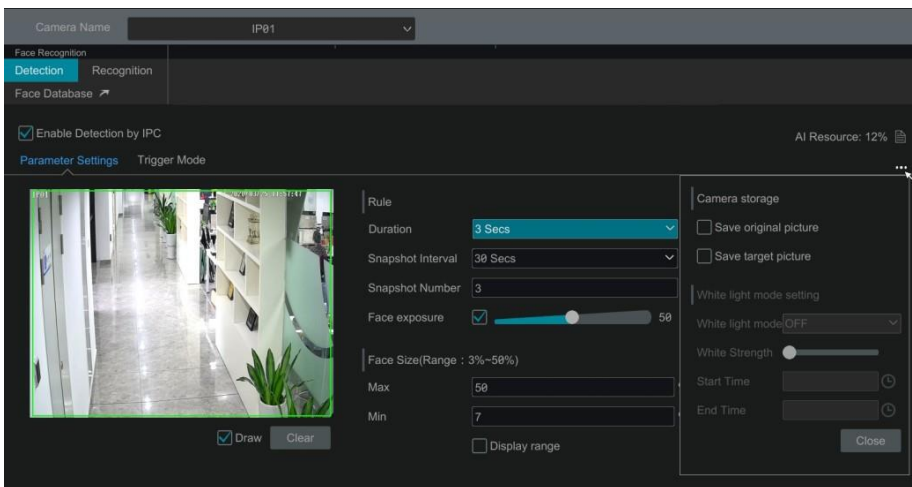

## Face Recognition

Only some models support alarm based on face match. If your device doesn't support face recognition function, please skip the face database and face recognition instructions.

### Detection Settings

**Face Detection:** Alarms will be triggered if someone intrudes into the pre-defined alarm areas.

① Click Start> Settings> AI/Even> AI Event> Face Recognition> Detection to go to the following screen.

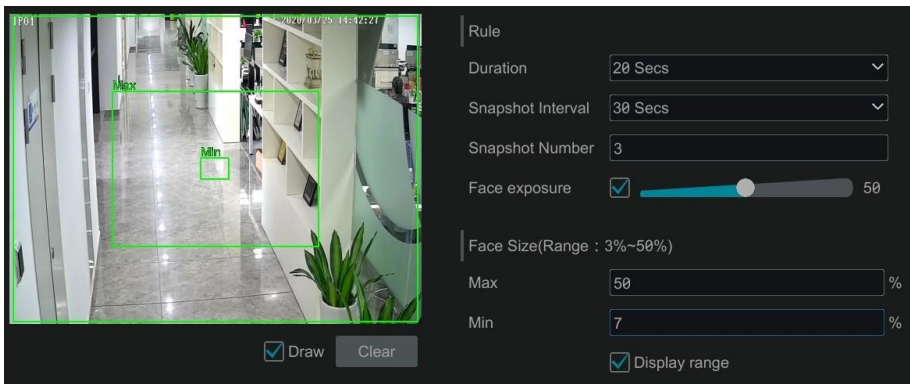

② Select the camera, check **-Enable Detection by IPC** and set the duration.

③ Set the snapshot interval and snapshot number. The snapshot interval refers to the time interval that the camera captures the same face during its continuous tracking period. The snapshot number refers to the picture number of the same face captured during its continuous tracking period (For example: the snapshot interval is set to **30 seconds** and the snapshot number is set to **3**; then the camera will capture the same face once every 30 seconds and it will capture their face 3 times at most during its continuous tracking period).

④ Enable face match exposure as need. When the brightness of the captured face is not enough, it can be enabled. (Only some IPCs support this function)

⑤ Set the alarm area. Click **-Draw** and then left click and drag the mouse to draw a detection area. Click **-Clear** to delete the alarm area. Then set the detectable face size by defining the maximum value and the minimum value (The default size range of a single face image occupies from 3% to 50% of the entire image).

- ⑥ Click **-Apply** to save the settings.
- ⑦ Click **-Trigger Mode** to go to face detection alarm linkage setting screen:

### Face Detection Alarm Linkage:

Trigger Mode allows you to pick which alerts are produced once a detection has been made: **-Record**, **-Snapshot**, **-Push**, **-Alarm-out**, **-Preset**, **-Buzzer**, **-Pop-up Video** and **-E-mail** as needed.

**Record:** Click the **-Configure** button to pop up the window. Select camera on the left side and then click the right arrows to set the camera as the trigger camera and select trigger camera on the right side and then click left arrows to cancel the trigger camera. Click **-OK** to save the settings. The trigger cameras will record automatically when faces are detected.

**Alarm-out:** Click the **-Configure** button to pop up the window. Then the **-Trigger Alarm-out** window will pop up automatically. Configure the trigger alarm-out in the window. The system will trigger the alarm-out automatically when faces are detected. You need to set the delay time and the schedule of the alarm outputs.

**Preset:** Click  and then select the preset for each camera.

**Snapshot:** check it. The current camera will capture images automatically when faces are detected.

**Push:** If it is enabled, the system will send push messages to your phone when faces are detected. The remote connection will need to be set up prior to this to work.

**Buzzer:** if it is enabled, the system will begin to buzz when faces are detected.

**Pop-up Video:** if it is enabled, the system will pop up the corresponding video automatically when faces are detected.

**E-mail:** if it is enabled, the system will send an e-mail when faces are detected. Enable **-IPC Audio** or **-IPC Light** as needed (only some IPCs support these two functions).

⑨ Click **-Apply** to save the settings.

### Face Database Management

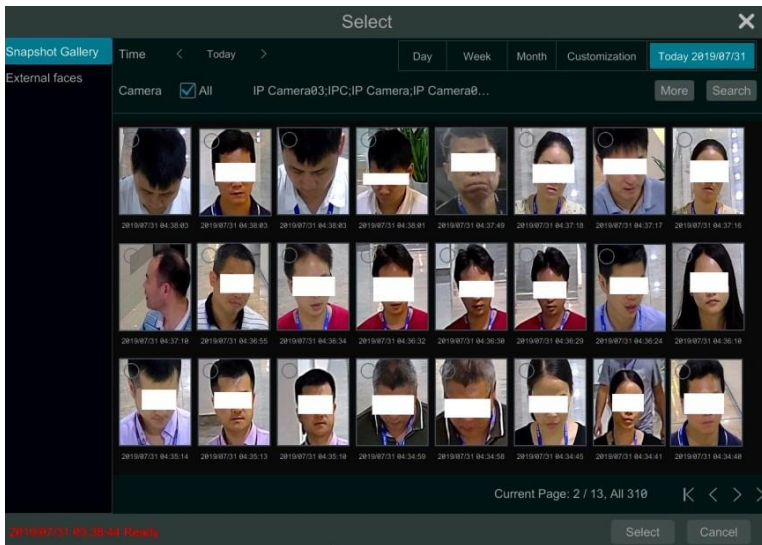

① Click **Start> Settings> AI/Event> Face Recognition> Face Database** to go to the following screen as shown below.

For the first time, you can click **“+”** or **-Add Group** to add groups.

② To add targets for each group. Select a list and then click  to expand the list as shown below.

Click **-Add** and then click **-Select Face** to add face images. You can add faces from snapshot gallery or external faces. **Adding faces from snapshot gallery:** Select search time or self-define the search time and then click **-Search** to search target faces. Then select the desired faces and click **-Select**.

### Add external faces

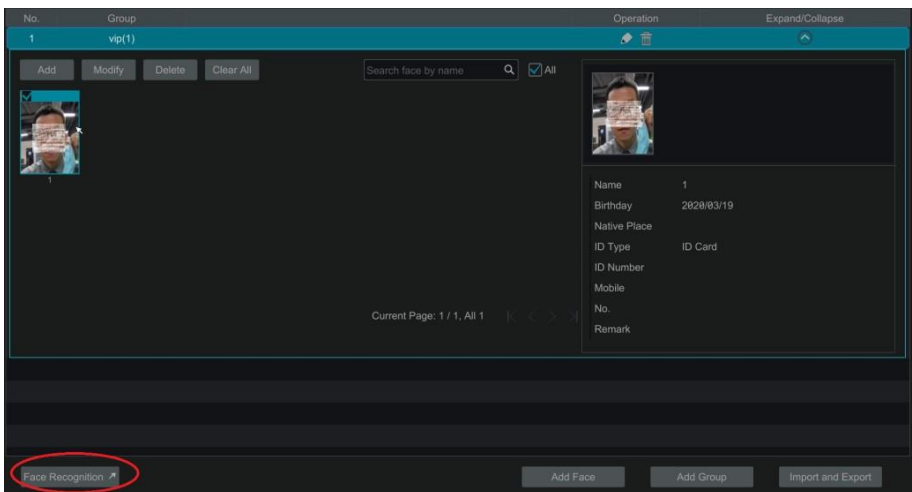

Save the face pictures in your USB storage device and then insert the USB storage device into the USB port of the NVR. Go to the face database screen. Click  to expand the group and then click **-Add**. Select **-External faces** to select face pictures you are wanting to add.

**To add multiple faces:** **a.** put face pictures and the description file (.csv or .txt) to one specific folder (please edit the detailed descriptions of these pictures according to the personal information description); **b.** click **-All** to select all face pictures; **c.** click **-Full Entry**.

**Note:** the added image must be less than 70KB, 128px x 128px, 1920x1080 and the image format should be either **-.jpg** and **-.jpeg**.

After that, add the corresponding information, like name, gender, birthday, ID number, phone number and so on.

Having saved the target image, click the image and then the detailed information will be listed on the right.

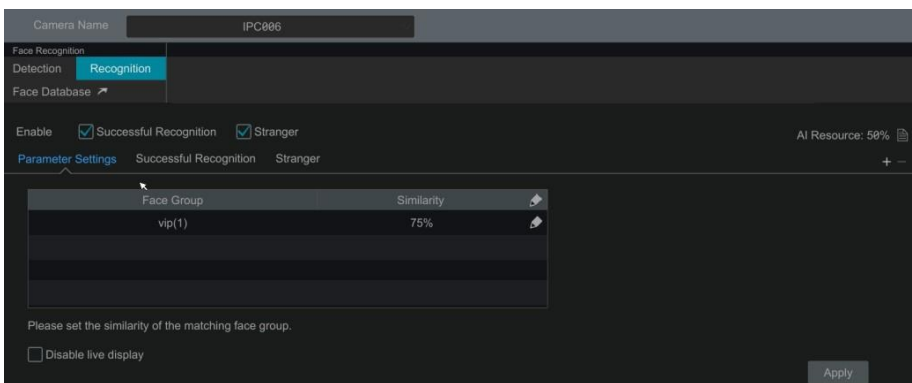

### Import and Export Face database

Insert your USB stick or removable drive into the USB port of the NVR and then click **-Import and Export** to import or export the face database settings.

### Face Recognition Settings

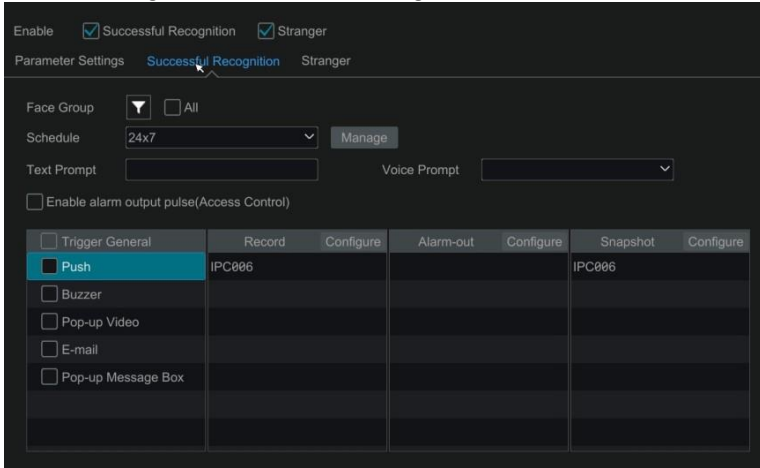

After the face database and face pictures are added, click **-Face Recognition** to return to the face recognition setting screen. Click the **-Recognition** tab to go to the following screen.

① Enable **-Successful Recognition** or **-Stranger**. Click **-Parameter Settings** to set the similarity of the matching face group.

**Disable live display:** if checked, the live view screen (target detection tab) will not display captured faces in real time.

② Set the alarm linkage items on successful recognition.

Select one or more face groups and then choose the schedule. Click **-Manage** to set the schedule.

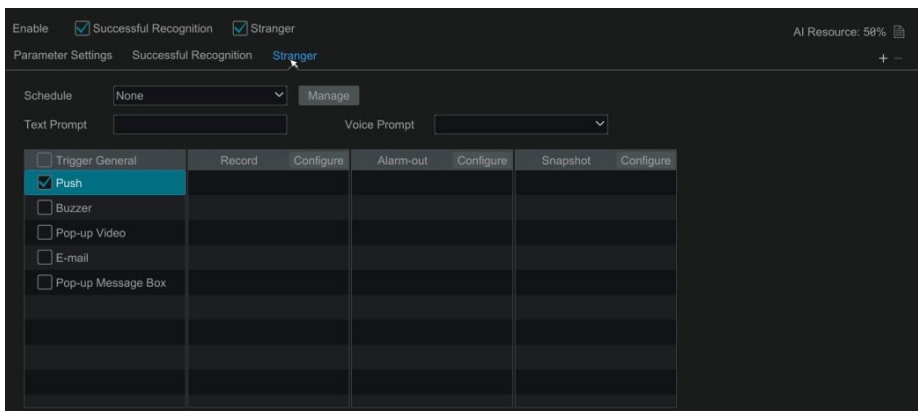

Set the text prompt and voice prompt. When the captured face is matched successfully, the text will appear on the right of the live view screen and broadcast the audio.

Enable alarm output pulse (access control)

Trigger record, snapshot, alarm-out, buzzer, push, pop-up video, E-mail and pop-up message box as needed.

Click **-Apply** to save the settings.

③ Set the stranger alarm linkage options. When the captured face picture doesn't match the face pictures in the face database or their similarity is lower than the set value, the captured person will be regarded as a stranger.

## Configure the schedule

Set the text prompt and voice prompt. The text will show on the captured picture and the voice will be broadcasted when detecting a stranger.

Trigger record, snapshot, alarm-out, buzzer, push, pop-up video, E-mail and pop-up message box as needed.

Click **-Apply** to save the settings.

④ Click **“+”** to add more successful recognition tasks. Select the added task and then click **“-”** to delete it.

## LPR

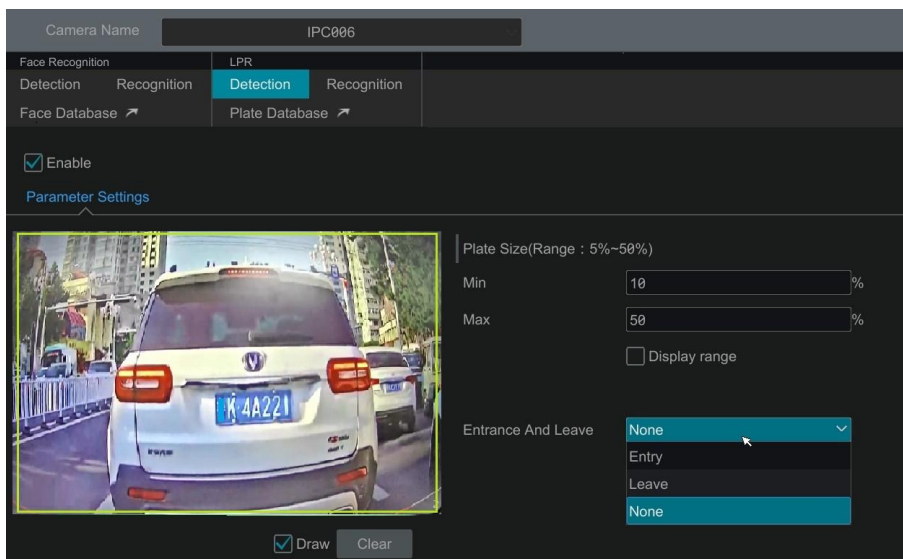

### License Plate Detection Settings

Click Start> AI/Event> AI Event> LPR to go to the following screen. Select an ANPR camera and click the **-Detection** tab as shown below.

Set the plate size by defining the maximum value and the minimum value (The default size range of a single plate occupies from 5% to 50% of the entire image).

Display range: if enabled, the set maximum detection box and the minimum detection box can be displayed on the left window.

Please select the entrance and exit according to the actual scene.

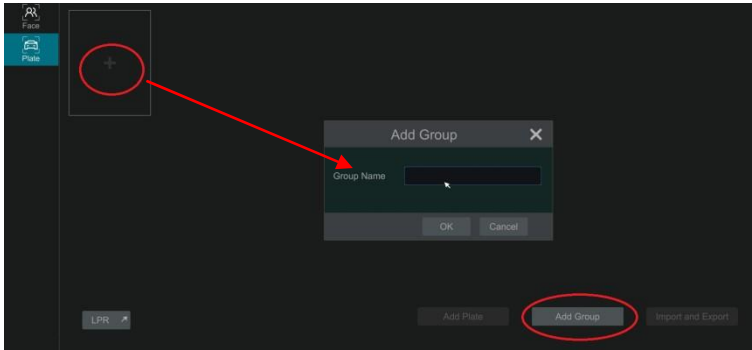

Set the alarm area. Click **-Draw** and then drag the mouse to draw a detection area. Click **-Clear** to delete the alarm area.

### Plate Database Management

In the LPR screen, click the **-Plate Database** tab to go to the plate database management screen as shown below.

For the first time, you can click **“+”** or **-Add Group** to add groups.

### Add plates to each group:

- 1 Click  to extend the group. Click **-Add Plate** to pop up the following window.

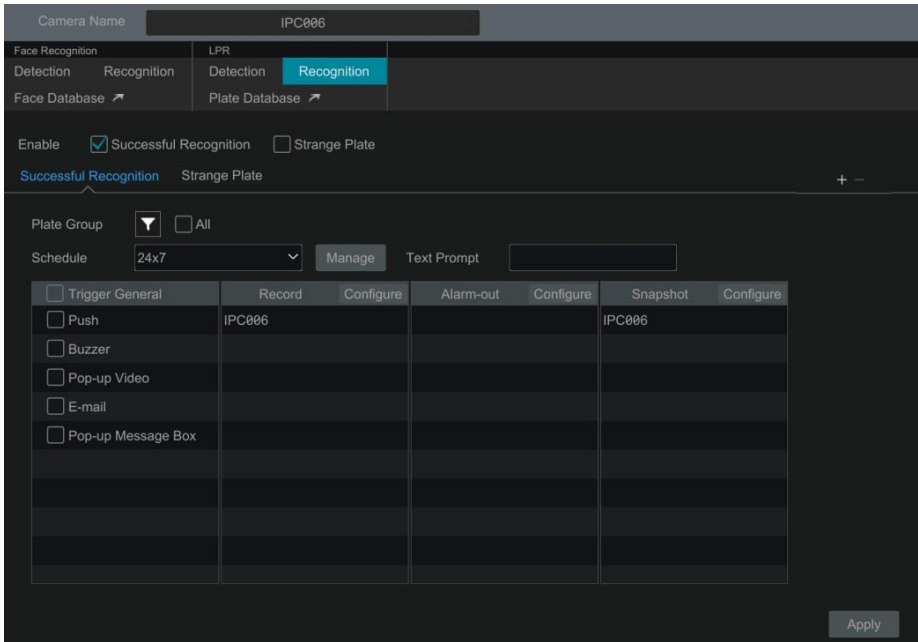

- 2 Enter the plate, vehicle owner and mobile phone number.
- 3 Select the vehicle type and group.
- 4 Enable validity period to set the start and end time
- 5 Finally click **-OK** to complete.

Select the added plate and then click  to modify its information; click  to delete this plate. The plates can be imported and exported in bulk by clicking **-Import and Export**. You can click **-Plate Information Description** to view the detailed information about how to import or export the plate list.

### License Plate Recognition Settings

- 1 In the LPR screen, click the **-Recognition** tab. Then enable **-Successful Recognition** or **-Strange Plate**.

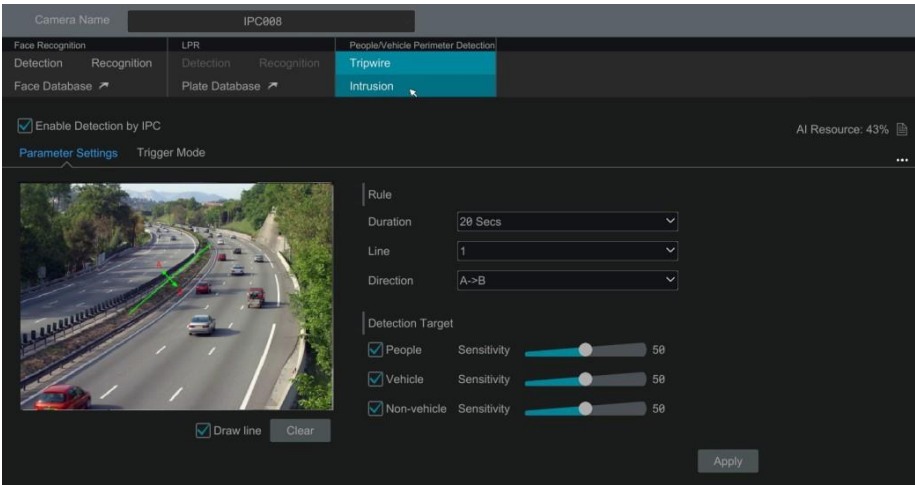

- ② Set the successful recognition alarm options. Select one or more plate groups and then choose the schedule. Click **-Manage** to set the schedule. Set the text prompt. When the captured plate is matched successfully, the text will appear on the right of the live view screen. Enable alarm output pulse (access control). Trigger record, snapshot, alarm-out, buzzer, push, pop-up video, E-mail and pop-up message box as needed.
- ③ Set the strange plate alarm options. When the captured plate picture doesn't match the plates in the plate database or their similarity is lower than the set value, the captured plate will be regarded as a strange plate.

**Tripwire**

**Tripwire/Line Crossing:**

Alarms will be triggered if the people or vehicles cross the pre-defined alarm line.

- ① Click Start> Settings> AI/Event> AI Event > Tripwire to go to the following screen.

② Select the camera, enable tripwire detection by IPC and set the duration.

**Note:** Some models may support tripwire detection by NVR.

③ Select the direction.

**Direction:** A->B, A->B and A<-B optional. It is the crossing direction of the target that crosses over the alert line.

**A<->B:** the alarm triggers when the target crosses over the alert line from B to A or from A to B.

**A->B:** the alarm triggers when the target crosses over the alert line from A to B.

**A<-B:** the alarm triggers when the target crosses over the alert line from B to A.

④ Draw line. Refer to the screen as shown above. Check **-Draw line** and then drag the mouse in the image to draw an alert line. Uncheck the **-Draw line** if you finish the drawing. Click the **-Clear** to delete the alert line.

⑤ Click **-Detection Target** to choose the detection target and the sensitivity. The detection target includes people, vehicle and non-vehicle. Only some IPCs can detect human or vehicle separately. If the camera doesn't support this function, please skip this step.

⑥ Click "... " to choose **-Save original picture** or **-Save target picture** on the SD card of the camera. (If your camera doesn't support this function, please skip this step).

⑦ Click **-Trigger Mode** to configure tripwire alarm linkage items.

Enable or disable **-Record**, **-Snapshot**, **-Push**, **-Alarm-out**, **-Preset**, **-Buzzer**, **-Pop-up Video** and **-E-mail**. Enable **-IPC Audio** or **-IPC Light** as needed (only some IPCs support these two functions).

⑧ Click **-Apply** to save the settings.

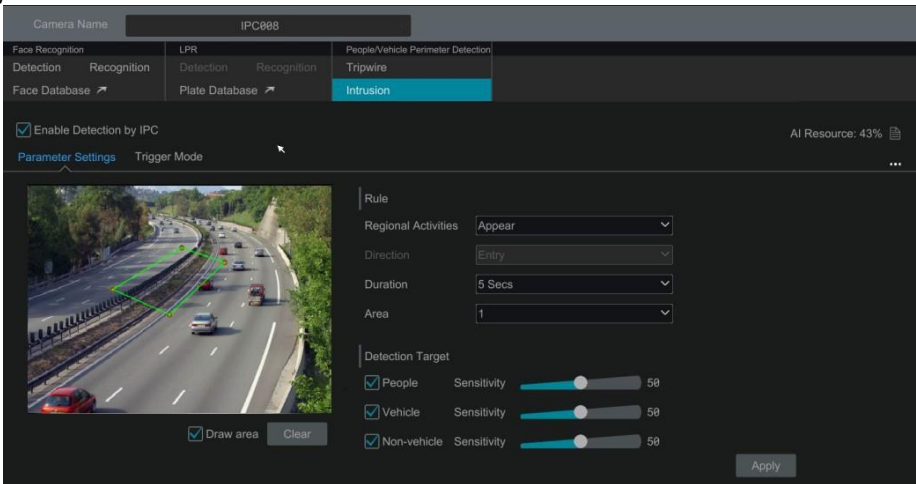

## Intrusion Detection

Alarms will be triggered if the people or vehicles intrude into the pre-defined area.

- ① Click Start> Settings> AI/Event> AI Event> Intrusion to go to the following screen.
- ② Select the camera, enable the intrusion detection by IPC and set the duration.

**Note:** Some models may support tripwire detection by NVR.

- ③ Select regional activities. **-Appear** or **-Cross** can be selected (if your camera doesn't support region entrance/exiting detection, **-Cross** will not be enabled). If **-Cross** is selected, you can choose the crossing direction.
- ④ Select the alarm area. Up to 4 alarm areas can be set up.
- ⑤ Draw the alarm area of the intrusion detection. Refer to the screen as shown below. Check **-Draw Area** and then click around the area where you want to set as the alarm area in the image, it should be a closed loop, similar to the image below. Uncheck the **-Draw Area** when you have finish so the area doesn't become altered. Click the **-Clear** to delete the alarm area.

- ⑥ Click **-Detection Target** to choose the detection target and the sensitivity. The detection target includes people, vehicle and non-vehicle.

- ⑦ Click **-Trigger Mode** to configure intrusion detection alarm linkage items.

Enable or disable **-Record**, **-Snapshot**, **-Push**, **-Alarm-out**, **-Preset**, **-Buzzer**, **-Pop-up Video** and **-E-mail**.

Enable **-IPC Audio** or **-IPC Light** as needed. (Only some IPCs support these two functions).

- ⑧ Click **-Copy To** will copy all settings to other cameras.
- ⑨ Click **-Apply** to save the settings.

### Abandoned/Missing Object Detection

① Click Start> Settings> AI/Event> AI Event> Object Abandoned/Missing to go to the following screen.

② Select the camera, enable the object detection and set the duration and detect type. There are two detection types: Abandoned object and missing object.

**Abandoned object:** Alarms will be triggered if there are articles left in the pre-defined detection area.

**Missing object:** Alarms will be triggered if there are articles missing in the detection area drew by the users.

③ Select the alarm area and area name. A maximum of 4 alarm areas can be set.

④ Draw the alarm area of the object detection. Refer to the screen as shown above. Check **-Draw Area** and then click around the area where you want to set as the alarm area in the image (the alarm area should be a closed area). Uncheck the **-Draw Area** if you finish the drawing. Click the **-Clear** to delete the alarm area.

⑤ Click **-Trigger Mode** to configure abandoned/missing object detection alarm linkage options. Enable or disable **-Record**, **-Snapshot**, **-Push**, **-Alarm-out**, **-Preset**, **-Buzzer**, **-Pop-up Video** and **-E-mail**.

⑥ Click **-Apply** to save the settings.

### Crowd Density Detection

Only some IPCs may support this function.

Alarms will be triggered if the crowd density exceeds the set threshold value in the pre-defined area.

① Click Start> Settings> AI/Event> AI Event> Crowd Density to go to the following screen.

② Select the camera, enable the crowd density detection and set the duration, refresh frequency and alarm threshold.

**Refresh Frequency:** It refers to the refresh time of the detection result report.

**Alarm Threshold:** Alarms will be triggered once the percentage of the crowd density in a specified area exceeds the pre-defined threshold value.

③ Select the alarm area. Draw the alarm area of the crowd density detection. Refer to the

interface as shown below. Check **-Draw Area** and then drag the mouse to draw a rectangle area. Uncheck the **-Draw Area** if you finish the drawing. Click the **-Clear** to delete the alarm area.

④ Click  to configure crowd density detection alarm linkage items. Enable or disable **-Record**, **-Snapshot**, **-Push**, **-Alarm-out**, **-Preset**, **-Buzzer**, **-Pop-up Video** and **-E-mail**.

⑤ Click **-Apply** to save the settings.

### Line Crossing Counting

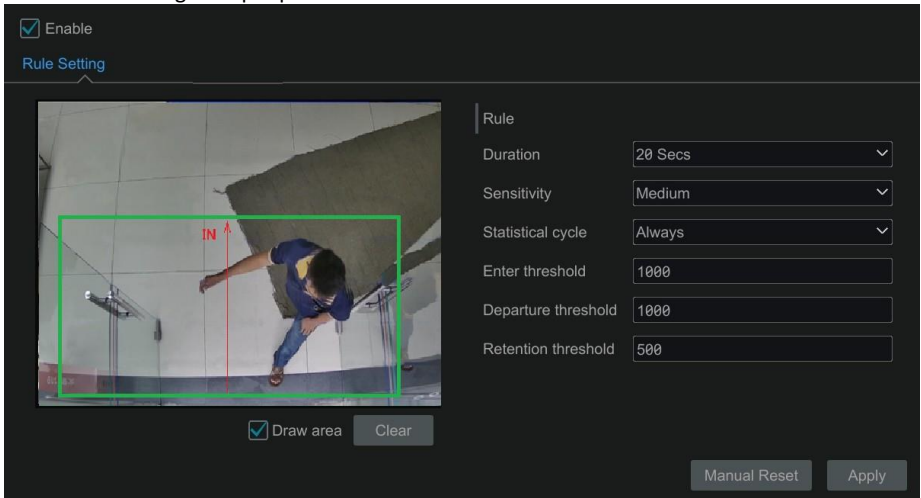

Only some IPCs may support this function.

### People counting in the pre-defined area:

This function is to calculate the number of people entering or exiting in the detected area on the video by detecting, tracking and counting the head shapes of people.

**Note:** Only some specific IPCs may support this function.

- ① Click Start> Settings> AI/Event> AI Event> Line Crossing Counting to go to the following screen.
- ② Select the camera, enable the line crossing people counting detection and set the duration, sensitivity, statistic cycle, enter threshold, departure threshold and retention threshold.  
**Statistic cycle:** Always, daily, weekly and monthly are optional.  
**Manual Reset:** The current number of people counting will be cleared and the statistic cycle will restart by clicking **-Manual Reset** button.
- ③ Set the alarm area and entrance direction. Click **-Draw Area** and drag the mouse to draw a rectangle area. Drag the rectangle to change its position. Uncheck the **-Draw Area** if you finish the drawing. Click **-Clear** to clear the area. Click and drag the arrow or the other end of the arrow line to change the people entrance direction.

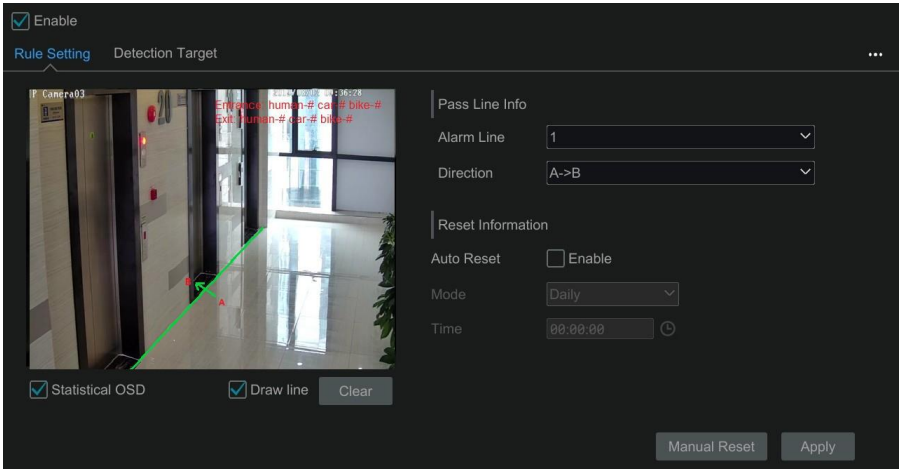

- ⑥ Click **-Apply** to save the settings.

### Line Crossing People/Vehicle/Non-Vehicle Counting

Only some IPCs support this function. If your camera doesn't support this function, please skip the following instructions.

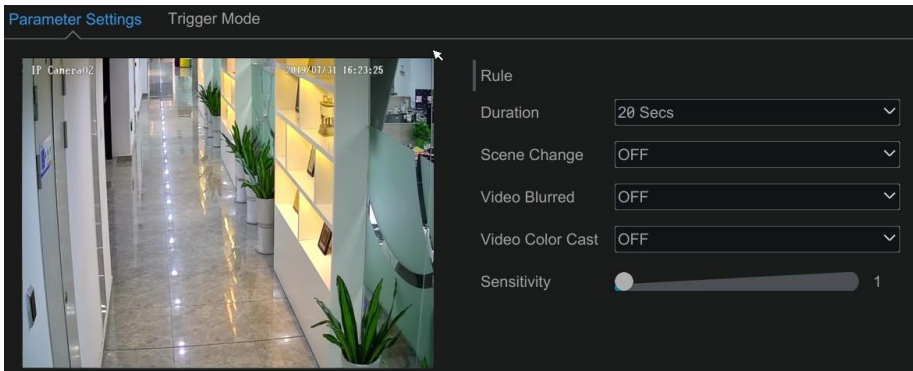

- ① Click Start> Settings> AI/Event> AI Event> Line Crossing Counting to go to the following screen.

- ② Enable line crossing counting.
- ③ Check **-Draw line** and then drag the mouse on the small window to draw the crossing line. Uncheck **-Draw line** to finish the drawing. Click **-Clear** to delete the alert line.  
**Direction:** A->B and A<-B are optional. It is the crossing direction of the target that crosses over the alert line.
- ④ Check **-Statistical OSD**, the statistical information will be displayed on the live view interface.
- ⑤ Set the reset information. You can set reset information manually or enable **-Auto Reset** as needed.
- ⑥ Click the **-Detection Target** tab to set the detection target, including people, vehicle and non-vehicle.
- ⑦ Click **-Apply** to save the settings.

### Exception Detection

- ① Click Start> Settings> AI/Event> AI Event> Exception Detection to go to the following screen.

② Select the camera and detection duration and then enable the relevant detection as needed.

**Scene Change:** Alarms will be triggered if the scene of the monitor video has changed.

**Video Blurred:** Alarms will be triggered if the video becomes blurry.

**Video Color Cast:** Alarms will be triggered if the video becomes obscured.

③ Set the sensitivity of the exception detection.

④ Click **-Trigger Mode** to configure exception alarm linkage items. Enable or disable **-Record, -Snapshot, -Push, -Alarm-out, -Preset, -Buzzer, -Pop-up Video** and **-E-mail**.

⑤ Click **-Apply** to save the settings.

## Intelligent Analytics

### Target Detection View

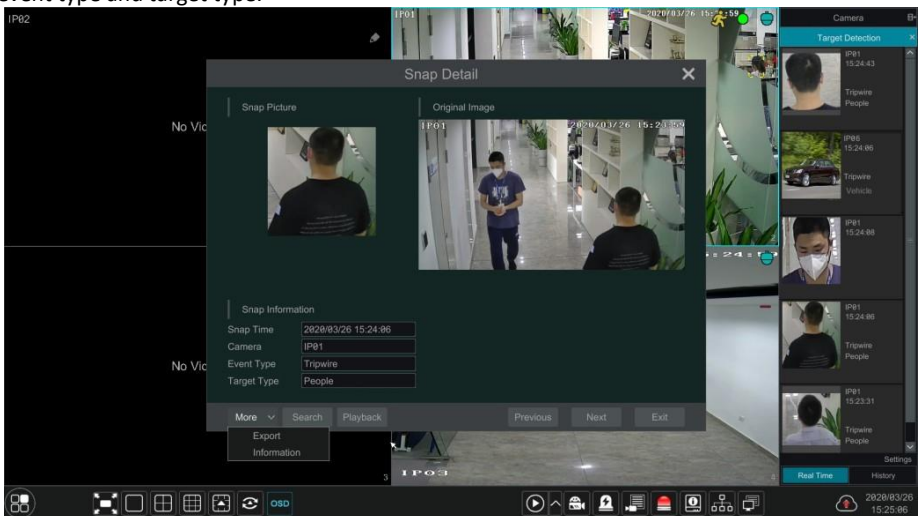

Only some models support target detection view. If your device doesn't support it, please skip the following instructions.

### Human Body/Vehicle Detection View

Only when the camera supports human body/vehicle detection, can you view the real-time captured people or vehicle pictures. The setting steps are as follow:

① Enable the Tripwire/Intrusion function of IPCs/NVR, draw the line or area and choose the detection target.

② Go to live view screen and then click  to go to the target detection screen of this channel. In this screen, you can switch the channel on the top right. You can also click  on the top right corner of the live view screen and then choose the target detection tab to go to the target detection screen of multi-channel as shown below. Click the captured picture on the right of the live screen to see the snapshot detailed information, such as snapshot time, camera, event type and target type.

Click **-More** to bring up a dropdown list. You can export the captured pictures by clicking **-Export** or view the target ID by clicking **-Information**. Click **-Search** to go to smart human body/vehicle search screen. The system will automatically search captured people/vehicles. Click **-Playback** to go to the playback screen.

### Face Detection/Match View

Only the face recognition NVR supports the following functions. If your NVR doesn't support them, please skip the following instructions. The setting steps are as follow:

- ① Enable face detection function.
- ② Enable face recognition function and set the alarm linkage items.
- ③ Go to live view screen and click on a face detection channel. This will bring a toolbar under the channel. Then click  to go to the target detection screen of this channel. In this screen, you can switch the channel on the top right. You can also click  on the top right corner of the live view screen and then choose the target detection tab to go to the target detection screen of multi-channel as shown below.

For unknown faces, you can select this face and click  under the captured face to register this face (see the following picture); click  to quickly go to the smart face search screen where you can search the matching face information; click  to quickly go to the smart face playback screen; click  to view snapshot details.

Before registering target face pictures, please add groups for them in advance. After the face pictures are registered, the system will compare them automatically once the corresponding faces are captured next time. Refer to the following picture.

Double click the face picture to see the snapshot details, such as snapshot picture, original image, snapshot time and camera. Click **-more** and then a dropdown list will display. Click **-Register** to register the current snapshot. Click **-Search** to go to face search screen. Click **-Playback** to go to the playback screen. Click **-Export** to export this snapshot details. Click **-Information** to view face ID.

In the face match screen, click **-Settings** to pop up the following window.

**Target Detection Display:** Face, human body and vehicle can be enabled. If disabled, the captured target picture will not be displayed under the target detection tab in the live view screen.

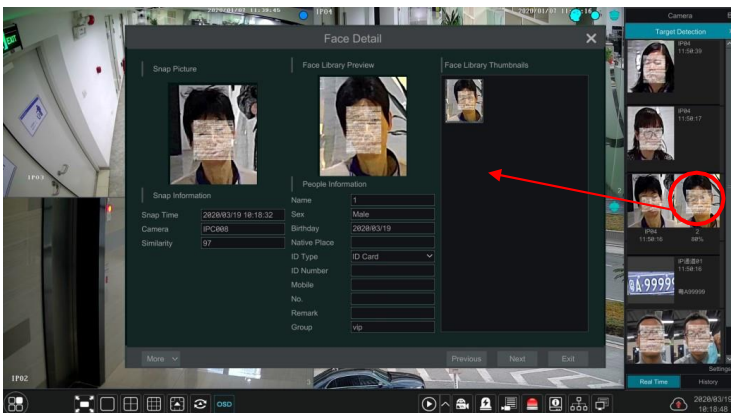

**Display Strategy:** Comparison priority and only comparison.

**Video Overlay Display:**

If **-Target box** is clicked, you will see the target traced by a little red box.

If **-Rule Line and Area** is checked, you will see the rule line of tripwire detection and detection area of intrusion detection displayed on the screen. You can select the color of the rule line and area as needed.

When the captured face pictures are successfully recognized, click the picture on the right to pop up a face detail window as shown below. In this window, you can see the captured face picture, the matched picture of face library and the relevant information. You also can view the original image, search image by snapshot, play back by snapshot and export the face details by clicking **-More** button.

Additionally, you can view the historical captured face pictures and face match information in the face match screen by clicking **-History** tab. Besides registering face pictures in the live view screen, you can also add target face pictures in the face database screen.

### License Plate Detection/Recognition View

Only when the ANPR camera is added and enabled, can license plates be captured and matched. The setting steps are as follows

① Enable the plate detection function.

Then you can see the captured plates displayed in the live views screen as shown below.

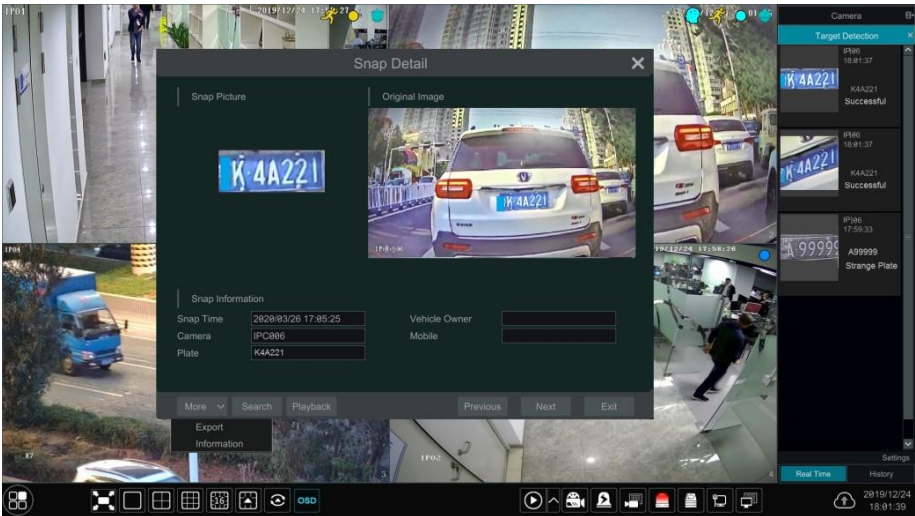

Put the cursor on the captured plate picture and then click  to register this plate as shown below.

Plate	K4A221
Vehicle Type	
Vehicle Owner	
Mobile	
Group	vip <span>Add Group</span>
Validity Period	<input type="checkbox"/> Enable

Click  to quickly enter the vehicle search screen. You can search the matched plate information in this screen. Click  to go to the smart playback screen.

- ② Enable license plate recognition function and set the alarm linkage items.
- ③ Go to live view screen and click  on the top right corner of the live view screen and then choose the target detection tab to go to the target detection screen of multi-channel as shown below. When the plate is captured, it will be displayed on the right panel. If this plate is successfully matched, it will show **successful** beside the plate picture. The strange plate will show **—strange plate** beside the plate picture.

Click the captured plate picture and then it will pop up the detailed information window. You can view the snapshot picture, original picture, snapshot time, camera, etc. Click **-More** to view the ID information of the target and export the captured picture. Click **-Search** to go to the vehicle search screen. Click **-Playback** to go to the playback screen.

## Smart Search

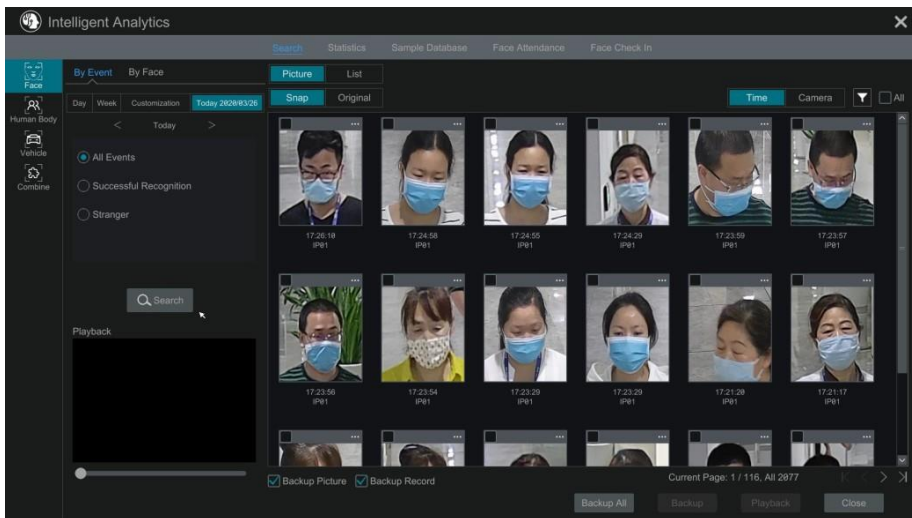

### Face Search

Only some models support this function. If your device doesn't support it, please skip the following instructions.

#### Face Search by Event

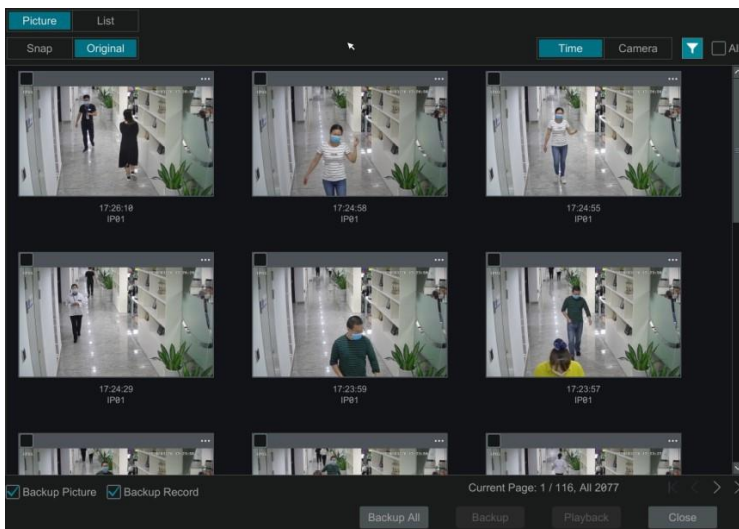

- ① Click Start> Intelligent Analytics> Search> Face to go to the following screen.

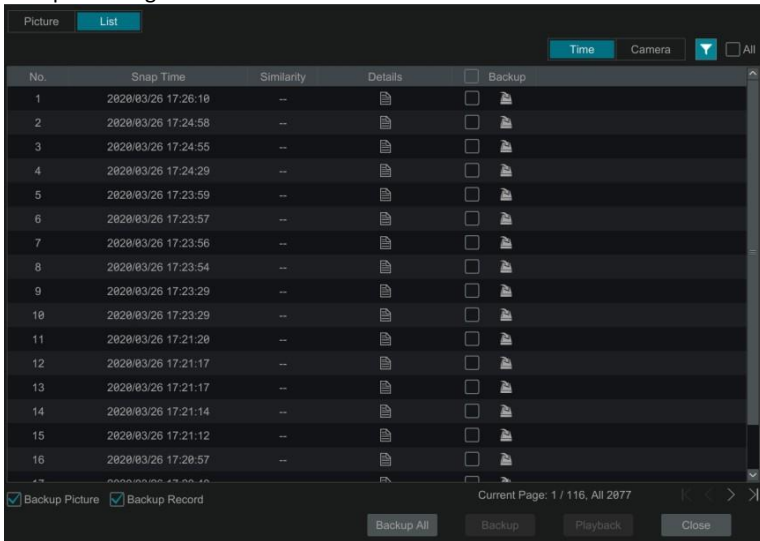

- ② Click  to choose face detection cameras.
- ③ Select all events, successful recognition or stranger.
- ④ Click **-Search** to search face pictures. You can view face pictures by time or by camera.
- ⑤ Click the searched face picture to play in the small playback window; select a face picture and click **-Backup** to export it.

Click **-Original** to see the original image as shown below.

Click **List** to view the snapshot information list. Click  to view the detail information; click  to back up the image.

No.	Snap Time	Similarity	Details	Backup
1	2020/03/26 17:26:19	--		<input type="checkbox"/>
2	2020/03/26 17:24:58	--		<input type="checkbox"/>
3	2020/03/26 17:24:55	--		<input type="checkbox"/>
4	2020/03/26 17:24:29	--		<input type="checkbox"/>
5	2020/03/26 17:23:59	--		<input type="checkbox"/>
6	2020/03/26 17:23:57	--		<input type="checkbox"/>
7	2020/03/26 17:23:56	--		<input type="checkbox"/>
8	2020/03/26 17:23:54	--		<input type="checkbox"/>
9	2020/03/26 17:23:29	--		<input type="checkbox"/>
10	2020/03/26 17:23:29	--		<input type="checkbox"/>
11	2020/03/26 17:21:20	--		<input type="checkbox"/>

16	2020/03/26 17:20:57	--		<input type="checkbox"/>

Backup Picture  Backup Record  Current Page: 1 / 116, All 2077

Buttons: Backup All, Backup, Playback, Close

### Face Search by Face

In the face picture search screen, click **By Face** to go to the following screen.

① Click  to add the target face which can be searched and added from recent, face database, snapshot gallery and external faces. A single face picture or multiple face pictures can be added and searched. (Take a single face picture for example)

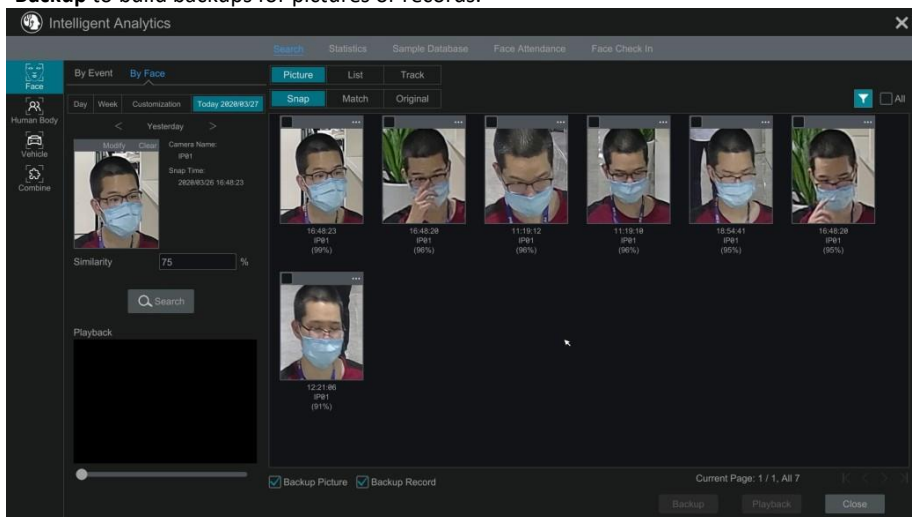

To add target face from recent  
Choose the face.  
Click **-Select Face**.

To add target face from face database:  
Click **-More** to choose groups.  
Select a target face and click **-Select Face**.

To add target face from snapshot gallery:  
Select time and click **-More** to choose cameras.  
Click **-Search**.  
Check a face and click **-Select Face**.

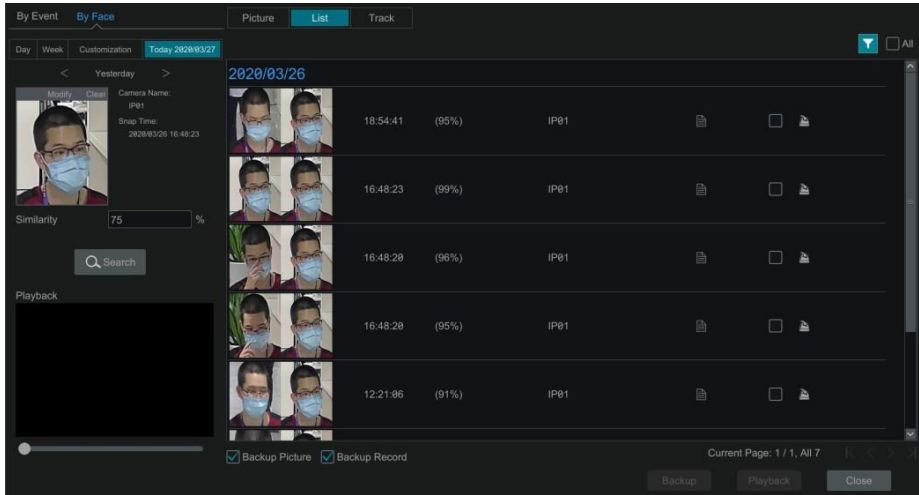

To add target face from external face:  
Save the target face to the mobile storage device and then insert this device into the USB  
screen of NVR.  
Select **-External Face** to import the face in this screen.

- ② Set similarity and then click **-Search**.
- ③ Click the searched image to play records in the small window.
- ④ Select the searched image and click **-Backup Picture** or **-Backup Record**. Then click **-Backup** to build backups for pictures or records.

## View Image by List

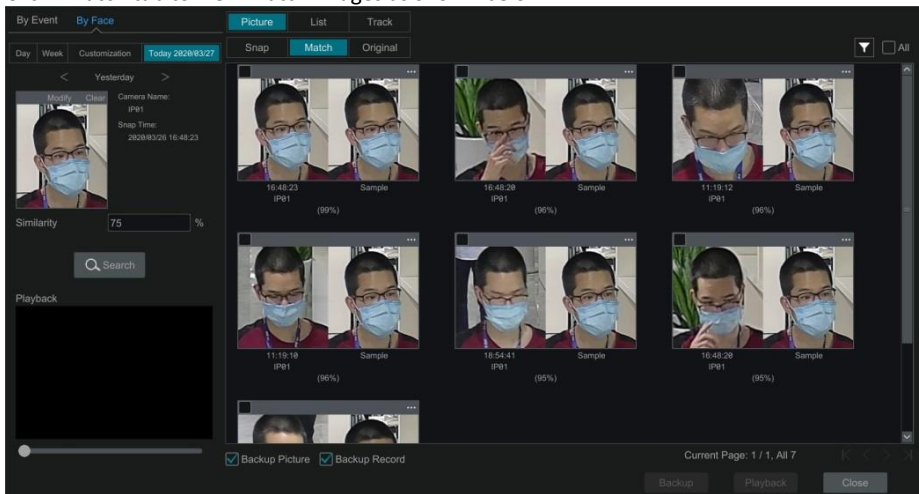

Click —List tab to view images by time as shown below.

Click the searched image to play. Click  to view the detail information of the compared target face.

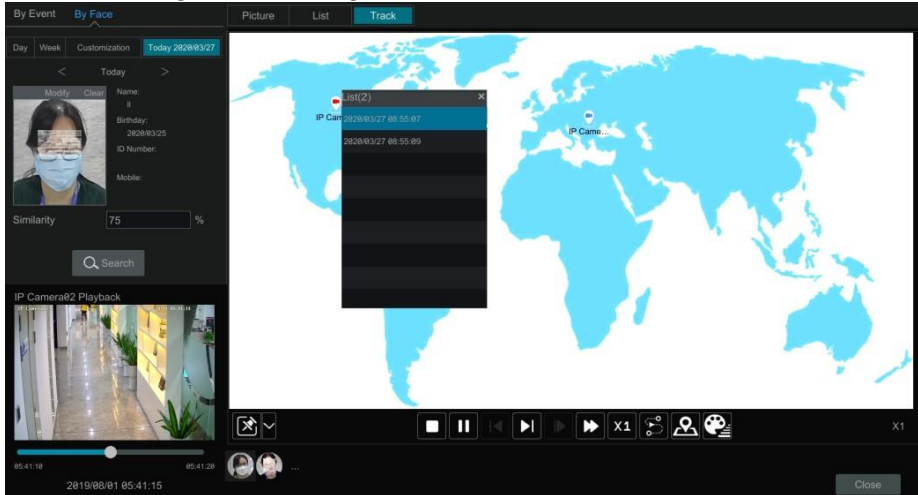

## View Match Images

Click -Match tab to view match images as shown below.

## Track Playback

Select —Track to go to the following screen.

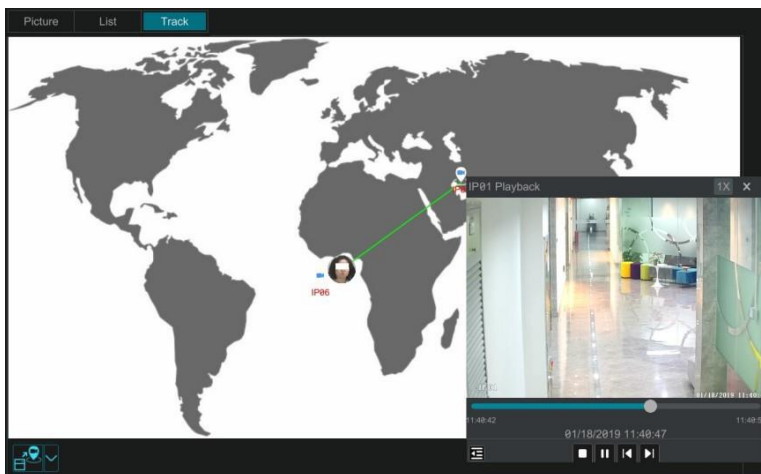

**Note:** Only when two or more cameras detect this person, can his/her track can be viewed here. Descriptions of buttons on the track screen

	Fixed Window		Frame
	Followed Window		Fast Forward ( x2;x4 )
	Exchange Window		Normal Speed
	Stop		Start/Stop Track
	Play		Edit Map
	Previous		Edit Color
	Next		

Click on the camera name and then an event list appears. Click one item to play the record.

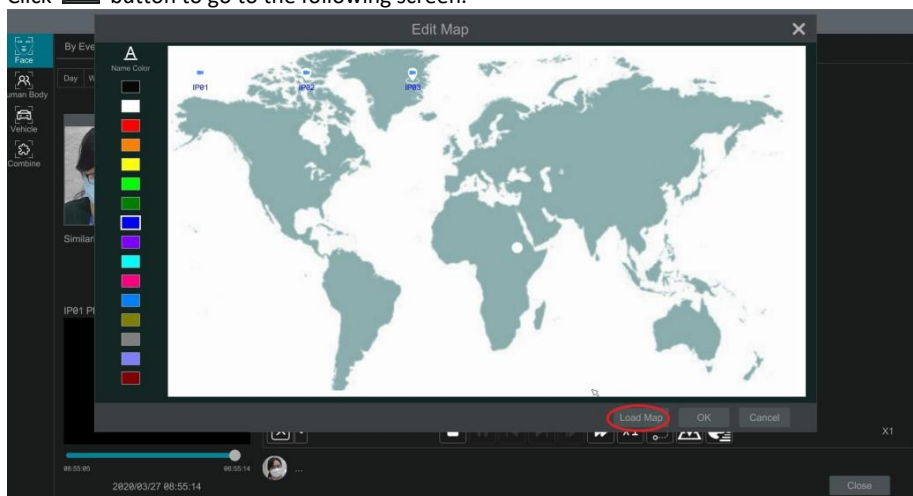

Click button beside the fixed window icon to show **-Followed Window** and **-Exchange Window** icons. The small playback window will float on the map window by clicking **-Followed Window** as shown below.

Click  to switch play speed. 1x and 2x can be switched. Click  to view event list. Click one item to play this event.

Click **-Exchange Window** to switch the position of the map window and the playback window.

Click  button to go to the following screen.

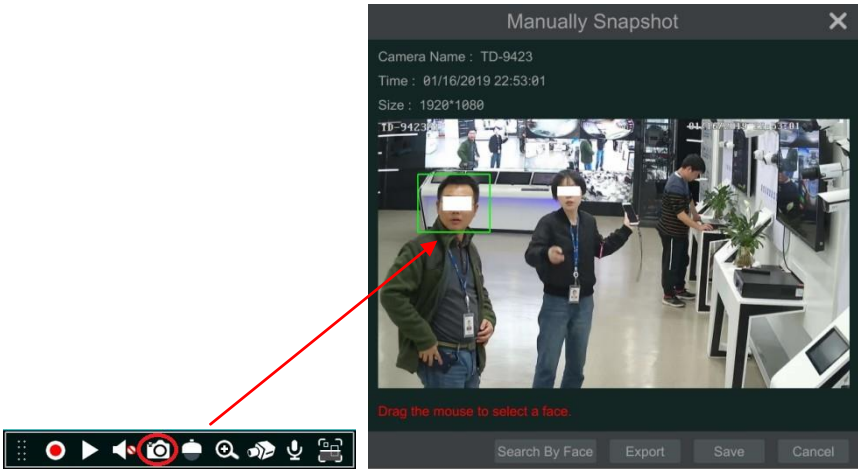

Click **-Load Map** to add a map. Then drag the camera names on the map to change their locations. Choose a color on the left color list to set your favorite color for camera names.

**Load Map:** ① Save the map to the USB storage device and then insert the USB storage device into the NVR. ② Click **-Load Map** button to upload the map.

Click  button to modify the colors of camera name and track line and set the line width.

## Face Search by Snapshot

In the live or playback screen, click on a face detection camera and then select  on the toolbar. This will bring the following window.

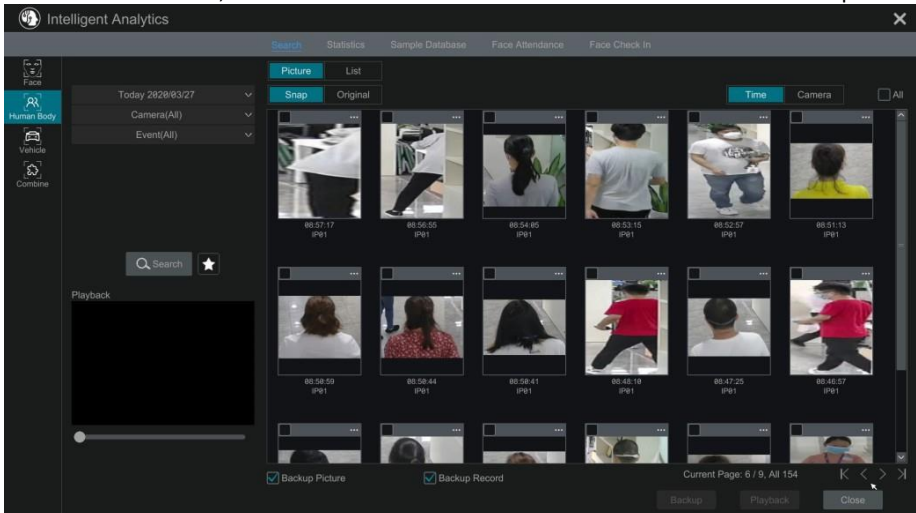

Drag the mouse to select a face and then click **-Search by Face** to go to the face search by face screen. You can see its snapshot pictures, match pictures, original pictures and so on by clicking the corresponding tab.

## Human Body Search

Click Start> Intelligent Analytics> Smart Search> Human Body to go to the human body search screen.

Select the search time, camera and event and then click **-Search** to view the searched pictures.

Click the searched picture to play the record in the small window. Select pictures and check **-Backup Picture** and/or **-Backup Record** and then click **-Backup** to back up the pictures and/or records. Click **-Original** to view the captured original pictures. Click **-List** to view the file list of the captured pictures.

Click  and select **-Add to favorite** to add a favorite group and save the current searched pictures to the favorite group. Then you can quickly view these figure pictures by clicking  and choosing the group name.

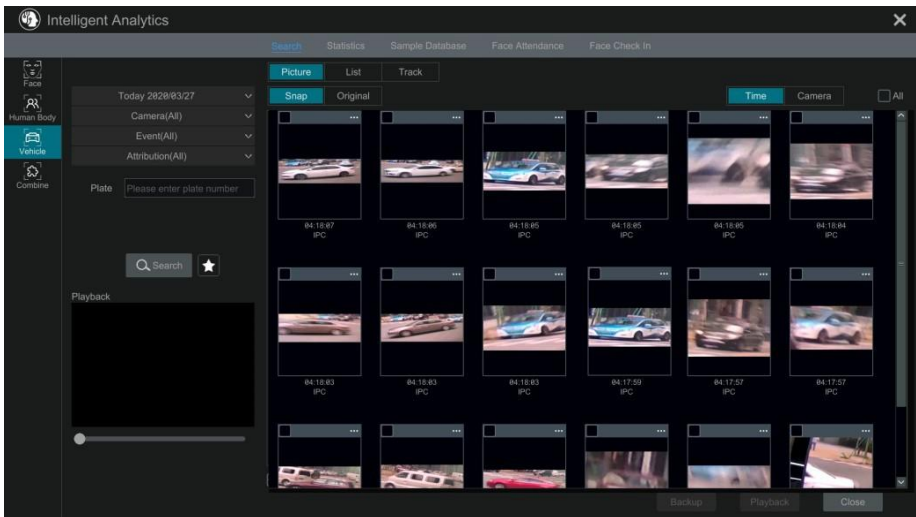

### Vehicle Search

① Click Start> Intelligent Analytics> Smart Search> Vehicle to go to the vehicle search screen.

② Select the time, camera, event and vehicle type. Then click **-Search** to search vehicles.

**Event:** Intrusion, Tripwire, Line Crossing Counting, Plate Detection, Plate Match-Successful Recognition and Plate Match-Strange Plate can be selected.

**Attribution:** Vehicle or non-vehicle can be selected. You can view face pictures by time or by camera.

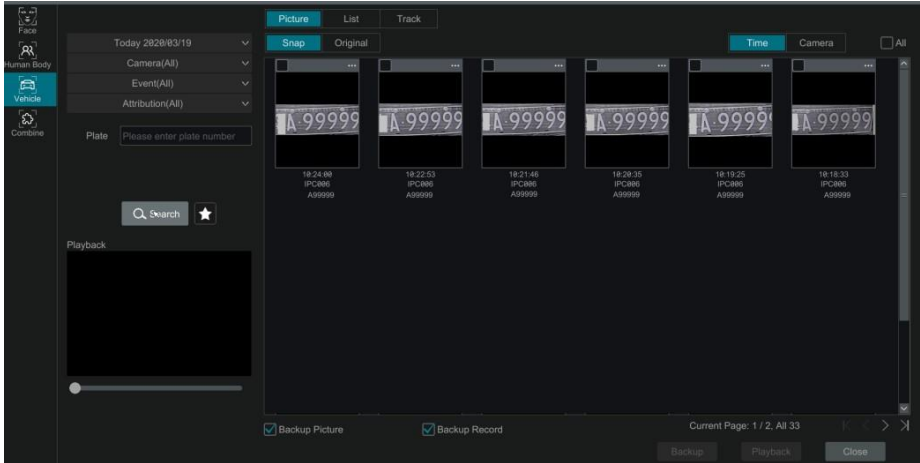

Click a searched vehicle picture to play it in the small window. Select vehicle pictures and check **-Backup Picture** and/or **-Backup Record** and then click **-Backup** to back up the pictures and/or records.

③ Click **-Original** to see the original pictures; click **-List** to view the snapshot information list.

Click  to view the detail information; click  to back up the image.

Select **-Plate Detection** or **-Plate Match** to view plate image. You can also enter the plate number to search the plate pictures. Then you can view the track of this vehicle.

Click **-Track** to view the track of the vehicle.

**Note:** Only one plate can be traced at a time and there must be two or more ANPR cameras that have detected this vehicle; thus, you can view the tracking of this vehicle.

The track setting steps are similar to the face track settings. Please refer to face track settings for details.

Click  to add a favorite group and save the current searched pictures to the favorite group.

Then you can quickly view these vehicle pictures by clicking  and choosing the group name.

### Combination Search

If you want to view the human body, vehicle or face pictures simultaneously, you can choose combination search.

① Click **-Combine**.

② Select the search time, camera, event and vehicle as needed.

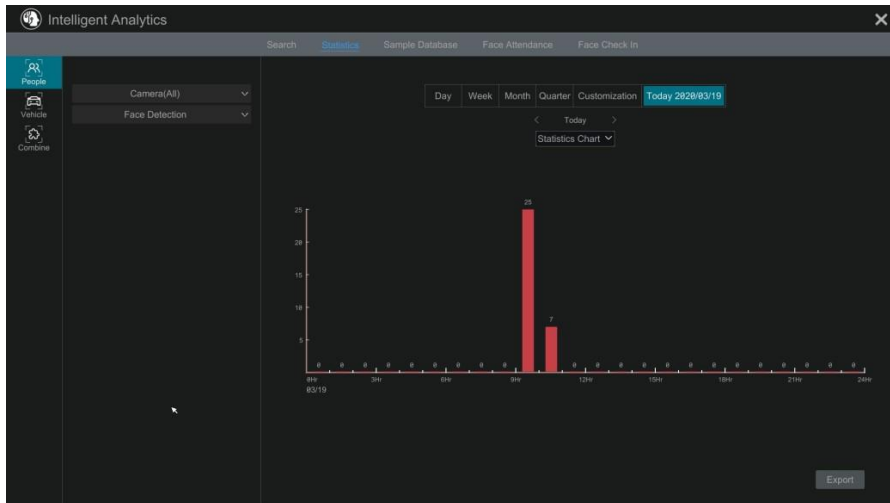

Click a searched picture to play it in the small window. Select pictures and check **-Backup Picture** and/or **-Backup Record** and then click **-Backup** to back up the pictures and /or records.

Click  to add a favorite group and save the current searched pictures to it.

Then you can quickly view these pictures by clicking  and choosing the group name.

### View Statistical Information

Click Start> Intelligent Analytics> Statistics to go to the following screen. In this screen, you can view the people and vehicle statistical information or you can customize the statistical information.

### View People Information:

**Note:** The person information includes both face and body information.

- ① Select the time.
  - ② Select cameras.
  - ③ Select events as needed, such as face detection, face recognition, intrusion, tripwire, etc.
- Note: Face recognition events (successful recognition & stranger) are available for some models. If Face Recognition-Successful Recognition event is selected, you can choose **-Detail Chart** to view.
